Background

Georgia Pre-K

Georgia Pre-K is a universal, full-day pre-K program open to all four-year-olds in the state.\(^1\) In 1995, Georgia became the first state to guarantee pre-K for all four-year-olds in the state. The Department of Early Care and Learning (DECAL) administers Georgia Pre-K as a competitive grant program. Child care centers, local school systems, and other public institutions (e.g., universities, military bases) are eligible to apply.\(^2\) Due to limitations in the state charter school law, charter schools can only offer pre-K through an affiliated pre-K program.\(^3\)

Because this is a universal program, there are no eligibility requirements for children other than age. Due to declines in revenue, however, the program does not fund sufficient slots to cover all interested families. As a result, providers need to develop a policy for how they will enroll preschoolers if the program is full.

Charter schools in Georgia

Georgia allows start-up and conversion charter schools. The majority of charter schools in Georgia are authorized by a local education agency or the state education agency. The new State Charter Schools Commission (SCSC) is an alternative charter authorizing body.\(^4\)

Process for Accessing Pre-K Funds

Charter schools and other providers interested in becoming Georgia Pre-K providers participate in the annual competitive grant application cycle. DECAL awards pre-K grant funding based on the quality of the application and the need in the service area, which DECAL evaluates by measuring the rate of saturation—i.e., how many pre-K slots there are compared with the number of eligible students—in the county where the program is located. New providers are only awarded funding after continuation classes (pre-K classes in good standing) are funded.\(^5\) A program is in good standing if it is fully enrolled and meets compliance requirements.

Existing providers annually apply for renewal and are often automatically awarded slots based on funding availability, identified regional need, and program compliance in the previous year. Any provider reporting fewer than nineteen students on the final roster of the previous year is not automatically awarded funding.\(^6\)
Barriers

Are there any statutory or regulatory barriers to charter schools accessing state funding for pre-K?

- **Yes.** Georgia’s charter law does not mention pre-K, and the pre-K law does not mention charter schools. DECAL, which administers the pre-K program, interprets the law to mean that charter schools can apply for state pre-K funding. The charter schools office at the Georgia Department of Education, however, interprets the law to mean that charters cannot be approved to offer pre-K. As a result, charters can offer affiliated programs but cannot serve preschoolers directly. At least nine charter schools in Georgia offer pre-K in this way.

Is the per-pupil funding level of the state pre-K program a barrier to charter access?

- **Yes.** Low pre-K program funding, compared to K–12 funding levels, makes pre-K less attractive to charters. Per-pupil funding for pre-K is low, even for a half-day program. Charter schools that offer half-day pre-K through an affiliated program receive between 29 percent and 43 percent of the per-pupil funding amount that charters receive to serve full-day K–12 students.

Is the size of the pre-K program a barrier to charter access?

- **No.** The size of the pre-K program does not limit charter access to funding. The program serves nearly 60 percent of four-year-olds in the state.

Is the application, approval, and/or funding process a barrier to charter access?

- **Yes.** The application and approval processes are barriers to charter access to state pre-K funding. Georgia does not fund enough pre-K slots to serve all eligible students. As a result, the state will only approve new pre-K providers if it identifies unmet need in a community rather than approving all providers that meet quality standards and allowing parent choice to determine enrollment.

Further, the existing funding process is biased against new providers. Existing providers receive priority over new providers and continue to receive funding as long as they meet compliance requirements.

Finally, Georgia charter schools must apply to DECAL for pre-K slots completely separate from their application to a charter authorizer for initial approval or grade expansion. In general, charter authorizers play no role in monitoring the quality of pre-K classrooms operated by charter schools and are not consulted in DECAL’s decisions about whether or not to award pre-K slots to charter schools. Separating pre-K oversight and charter authorizing roles in Georgia has several negative consequences, including:

- Encouraging charter schools—and other providers in Georgia—to think about pre-K as a separate “program” from their K–12 offerings.
- Not requiring authorizers to hold charter schools accountable for the performance of their pre-K programs.
- Not taking authorizers’ judgments of schools’ K–12 academic, operational, or fiscal performance into account when making DECAL funding decisions.
- Requiring charter schools that wish to serve pre-K to apply through two separate processes—one to be approved as a charter, and one to offer pre-K—with different timelines and requirements and requiring them to submit reports to and receive monitoring from two different oversight agencies. This imposes an additional compliance burden on charter schools that serve preschoolers.

Is automatic enrollment from pre-K to kindergarten prohibited in legislation or practice?

- **No.** According to Georgia code, children who matriculate from a pre-K program at a charter school receive enrollment preference if they want to attend kindergarten at that charter school. This enrollment preference was only recently incorporated into the law, however, and few charter schools in the state take advantage of it.

Recommendations

To address the barriers to charter access to state pre-K funding, Georgia should explicitly allow, in either legislation or agency guidance, that charter schools are eligible to access state funding for pre-K. Georgia should also shift responsibility for overseeing charter pre-K programs from DECAL to authorizers. Charter schools that wish to serve preschoolers should obtain approval from their authorizer. DECAL should then award charter schools the number of slots approved by their authorizer, but reduce funding if the school fails to meet its authorized preschool enrollment.

If the state is concerned about the number of pre-K slots that authorizers might approve, it could impose an annual cap on the number proportionate to the percentage of all Georgia kindergarteners enrolled in schools approved by the authorizer in the prior academic year. Authorizers that lack capacity to
oversee pre-K programs could delegate or subcontract oversight of charter pre-K programs to DECAL.

If Georgia fails to shift oversight of charter pre-K programs from DECAL to authorizers, the following recommendations could improve DECAL’s process to make it more equitable to charter schools and other new providers:

- Extend the duration of Georgia Pre-K grants. DECAL could continue to monitor program quality over the duration of the grant without requiring programs to reapply annually. This would increase stability and reduce the burden of annual applications for charters and other providers.
- Re-compete existing slots at the end of the grant period, and allow both new and existing providers to compete on an equitable basis, based on student need, program quality, and track record of improving student outcomes. Open the competition to new providers whether or not total appropriations for the program increase.
- Give additional points in the Georgia Pre-K grant process to charter schools whose applications indicate their authorizer supports their applications.
